Hôpital Pitié-Salpêtrière. Paris

NRI PSL

OBJECTIFS

- Connaitre les stratégies pour obtenir un **micro-cathétérisme stable en intra-crânien**
- Connaitre les stratégies pour **franchir le caillot**
- Connaitre les stratégies pour les **recanalisations distales**

ACCÈS

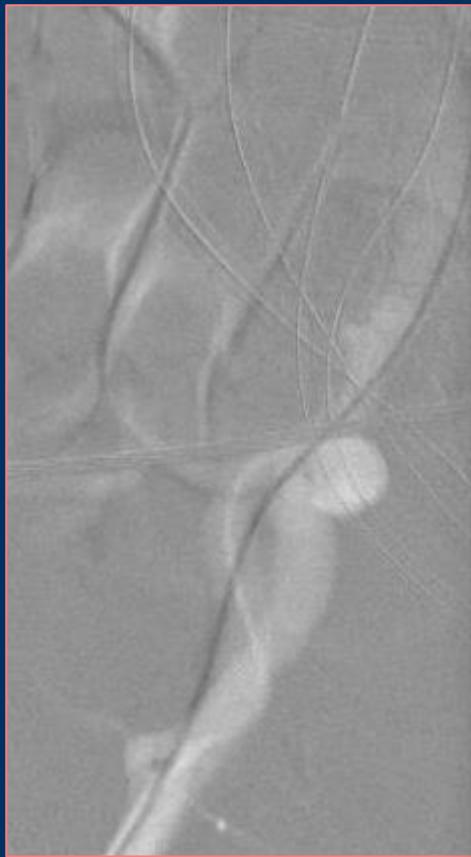

Tout commence par les fondations de l'édifice ...

- Un leitmotiv : la **stabilité**
- Plus le cathéter porteur est distal, plus il est stable
- Cathétérisme **triaxial** +++

Stabilité

- *Introducteur Arrow
9F 24 cm*
- *NeuronMax 6F sur
sonde Simmons 2 5F*
- *Cathéter aspiration*

STRATÉGIE

- **Aviation civile :**
 - Plan the flight
 - Flight the plan
- **Mais savoir changer de stratégie en cours d'intervention**

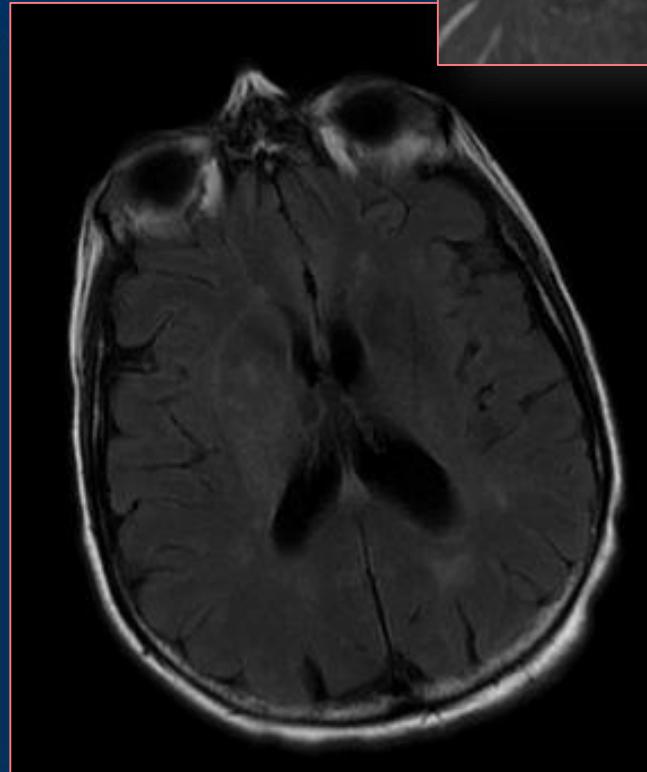

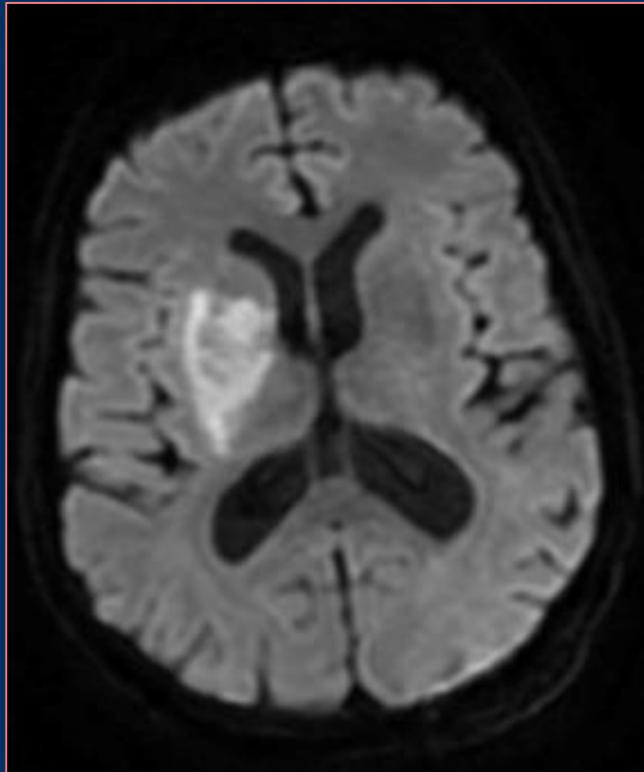

STRATÉGIE

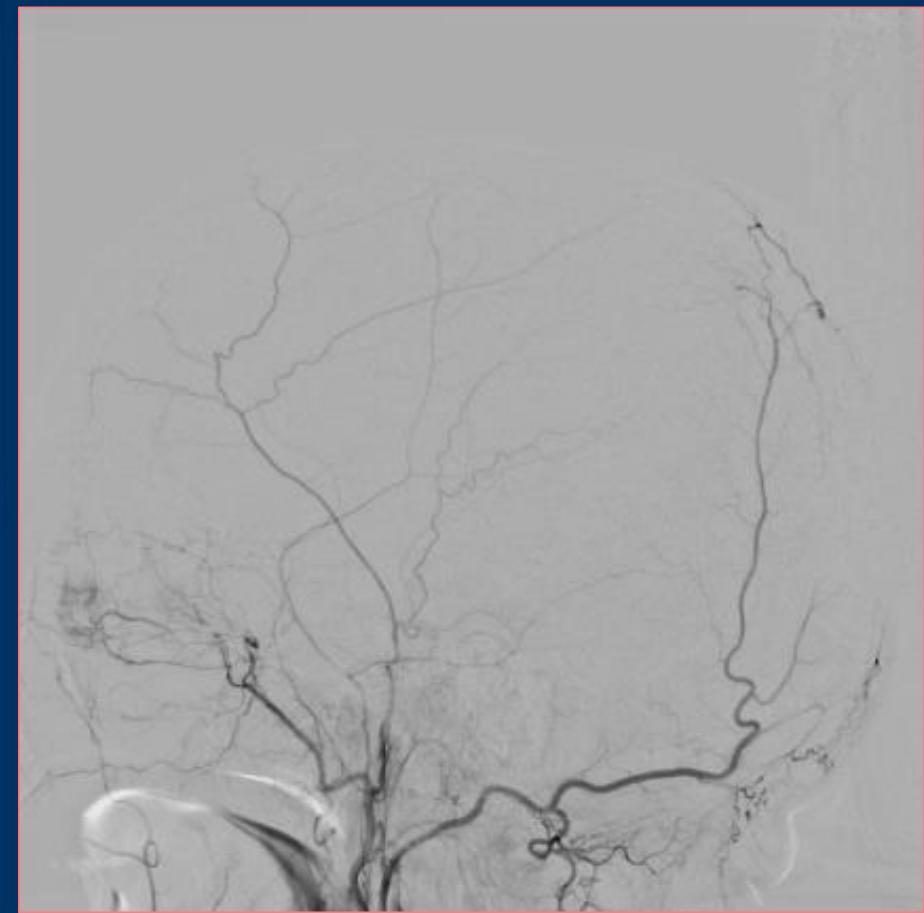

- **Dès le bilan diagnostique :**

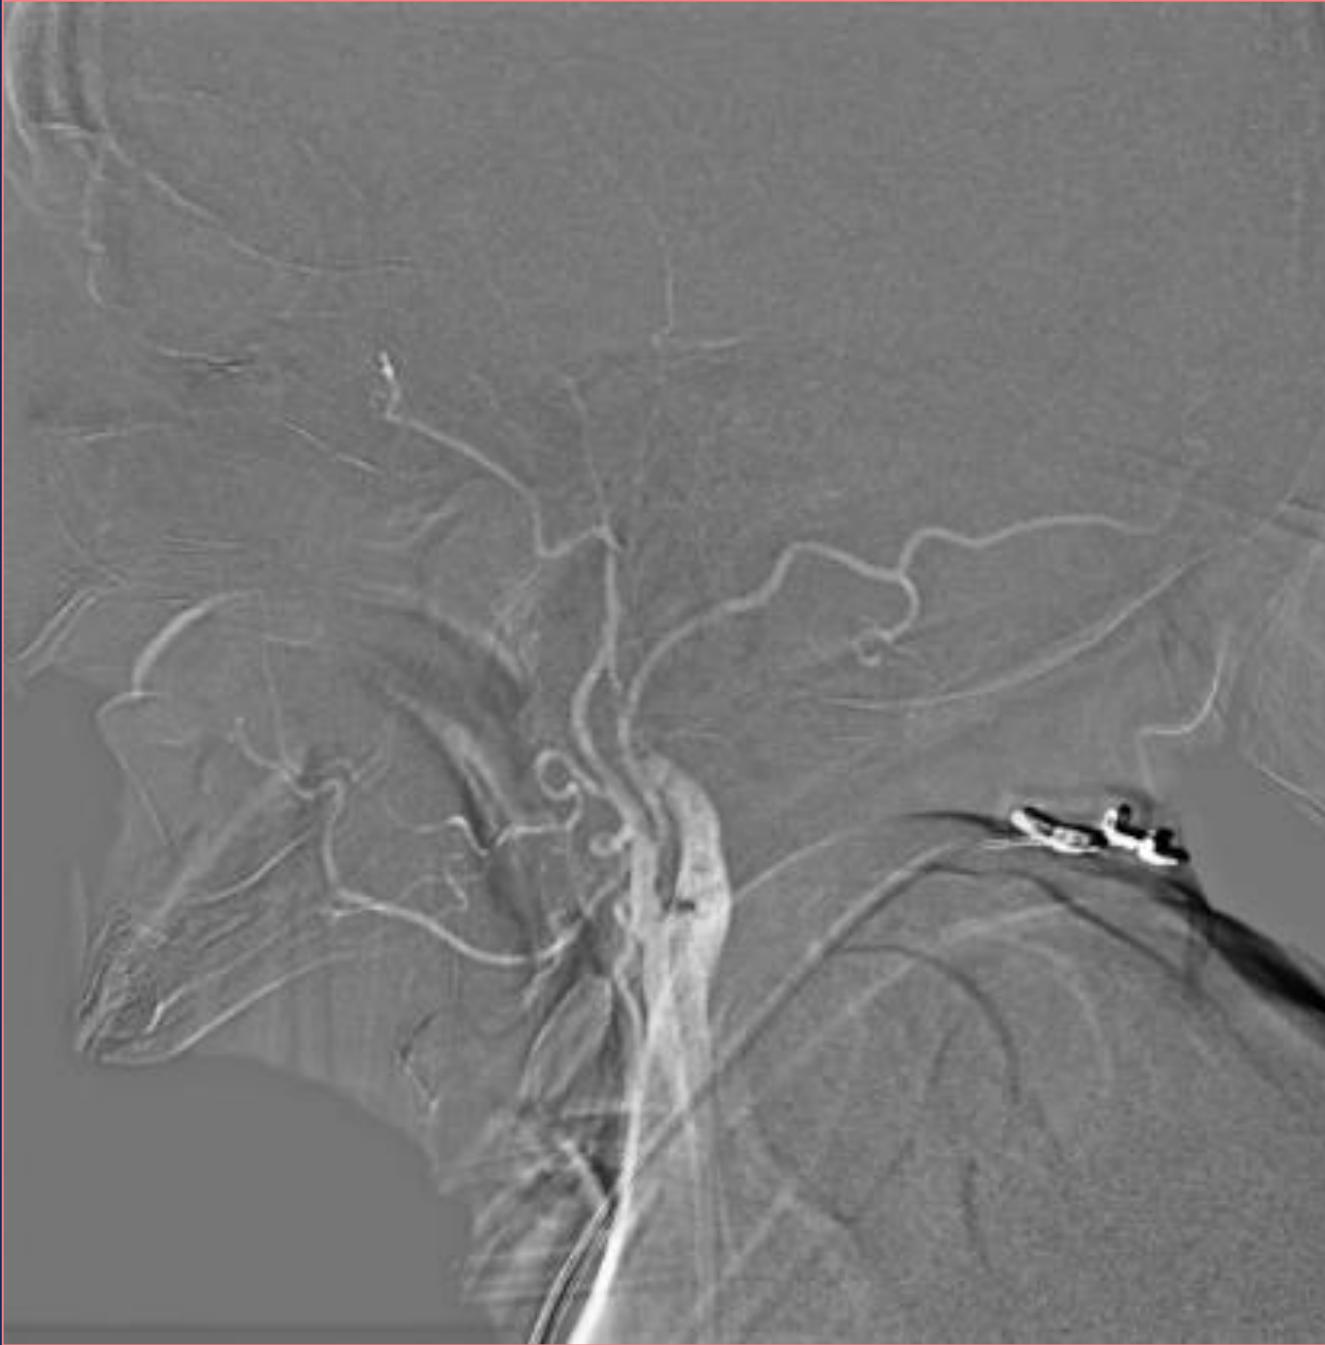

Patient de plus de 70 ans et/ou absence de visualisation de l'ACI ou de l'a.
vertébrale dominante en intra-crânien :
imagerie des TSA
- Introducteur long fémoral 9F (24 cm)
- Introducteur long 6F souple (80 ou 90 cm)
- Cathéter d'aspiration 6F

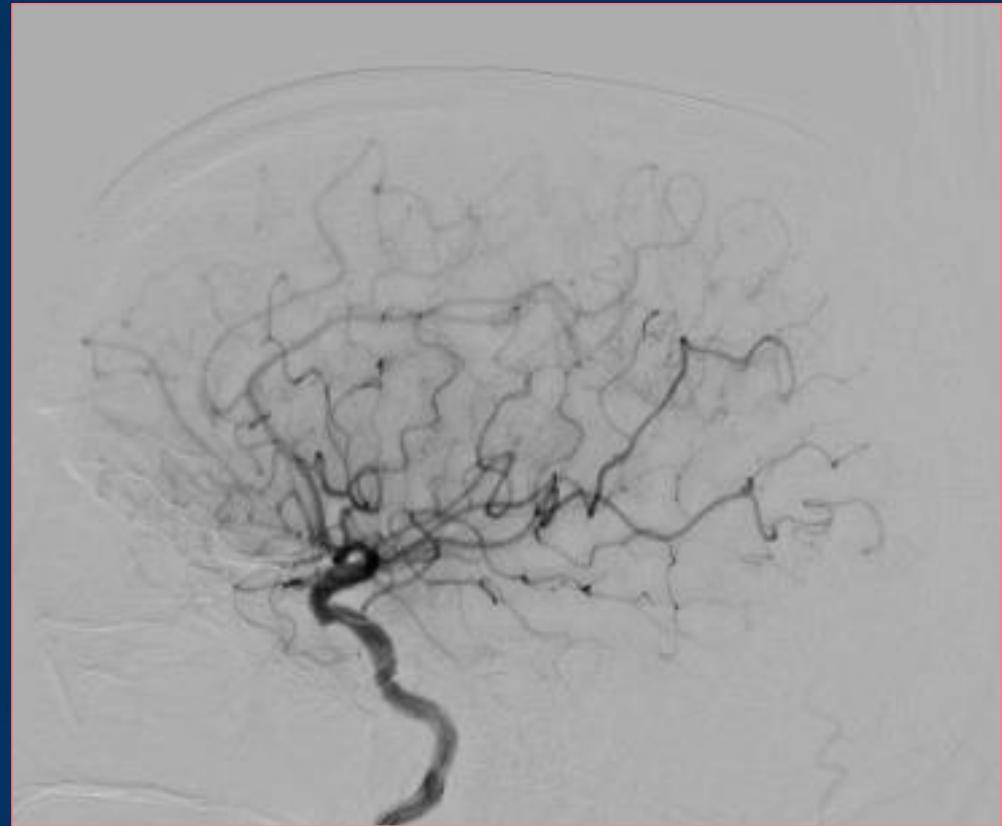

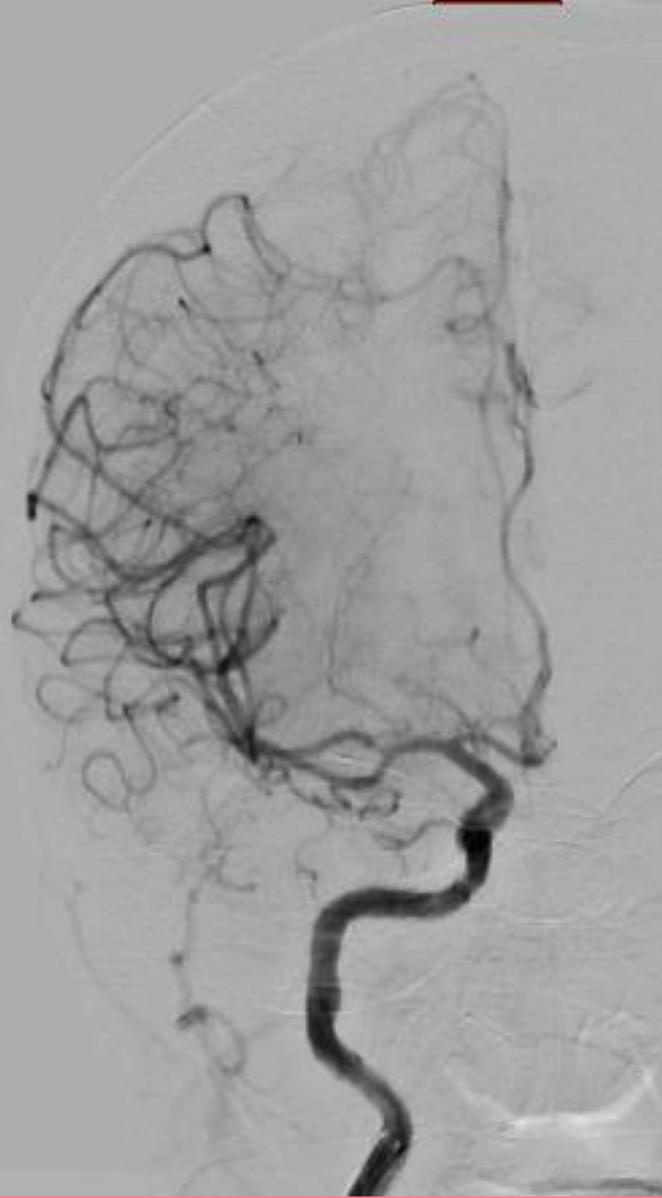

- Patiente de 63 ans
- Déficit brutal hémicorps G
- NIHSS = 14

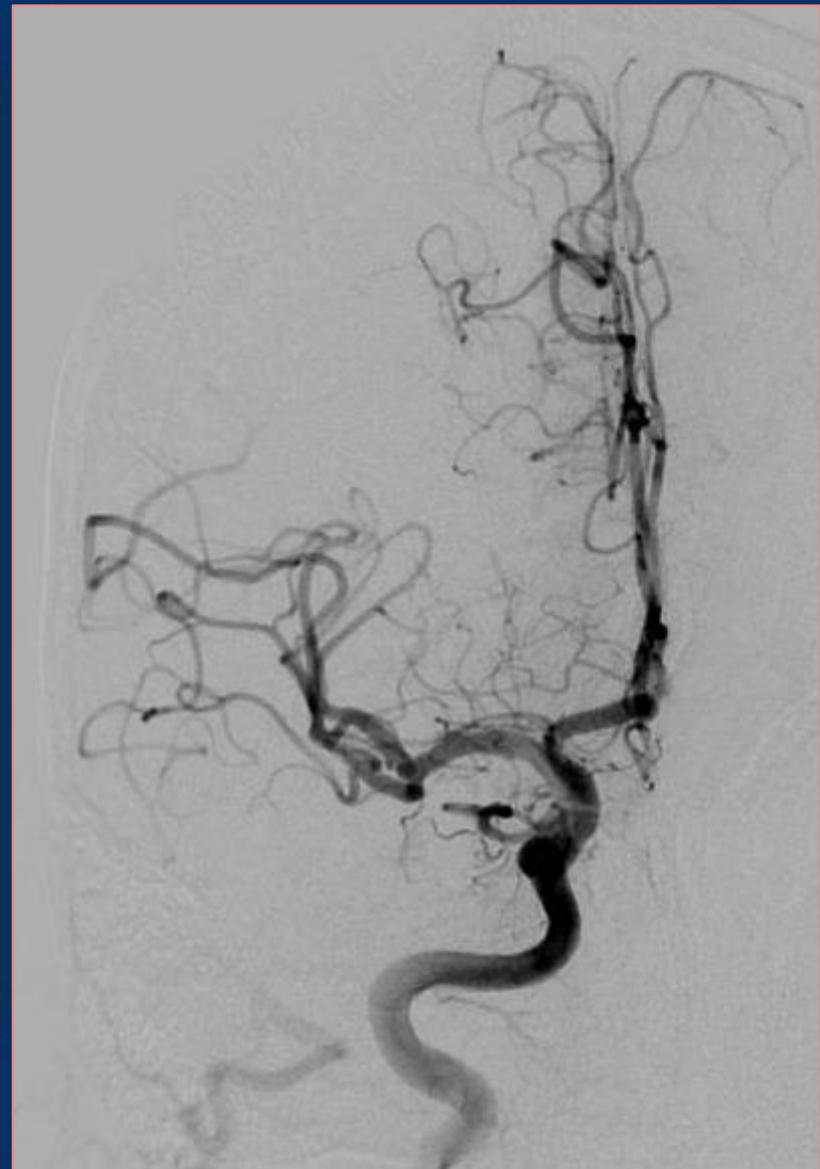

Éco/

STRATÉGIE

- Savoir changer de stratégie :

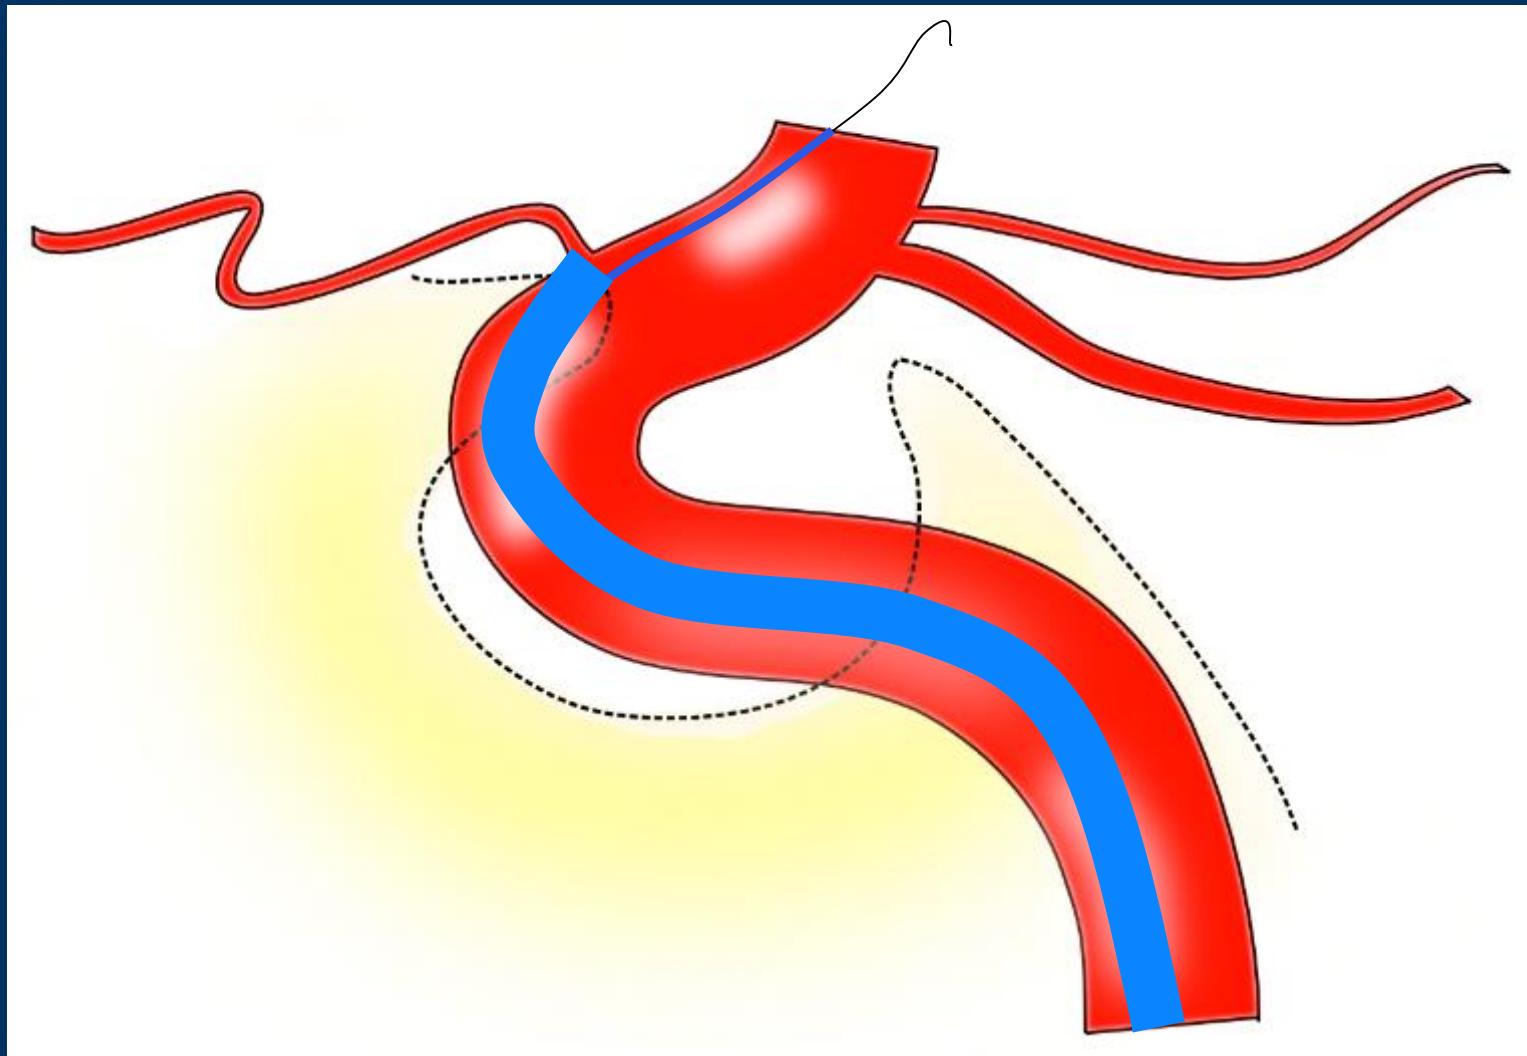

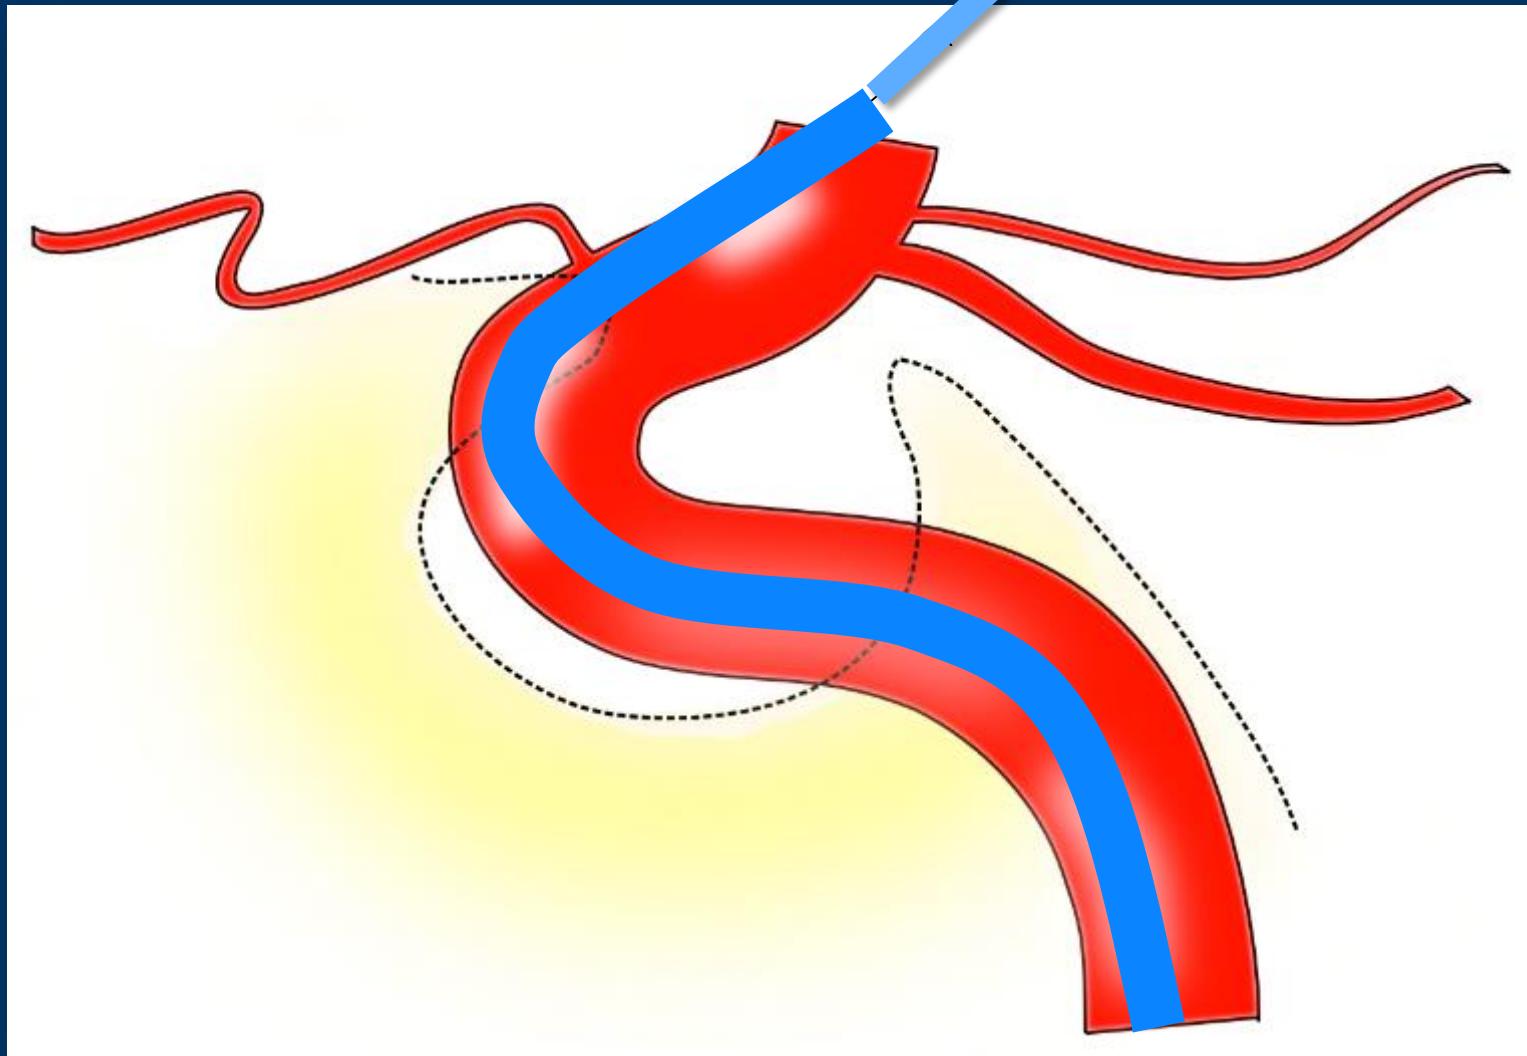

ASPIRATION DIRECTE (ADAPT) OU « SOLUMBRA »

- Mon cathéter ne monte pas dans le siphon

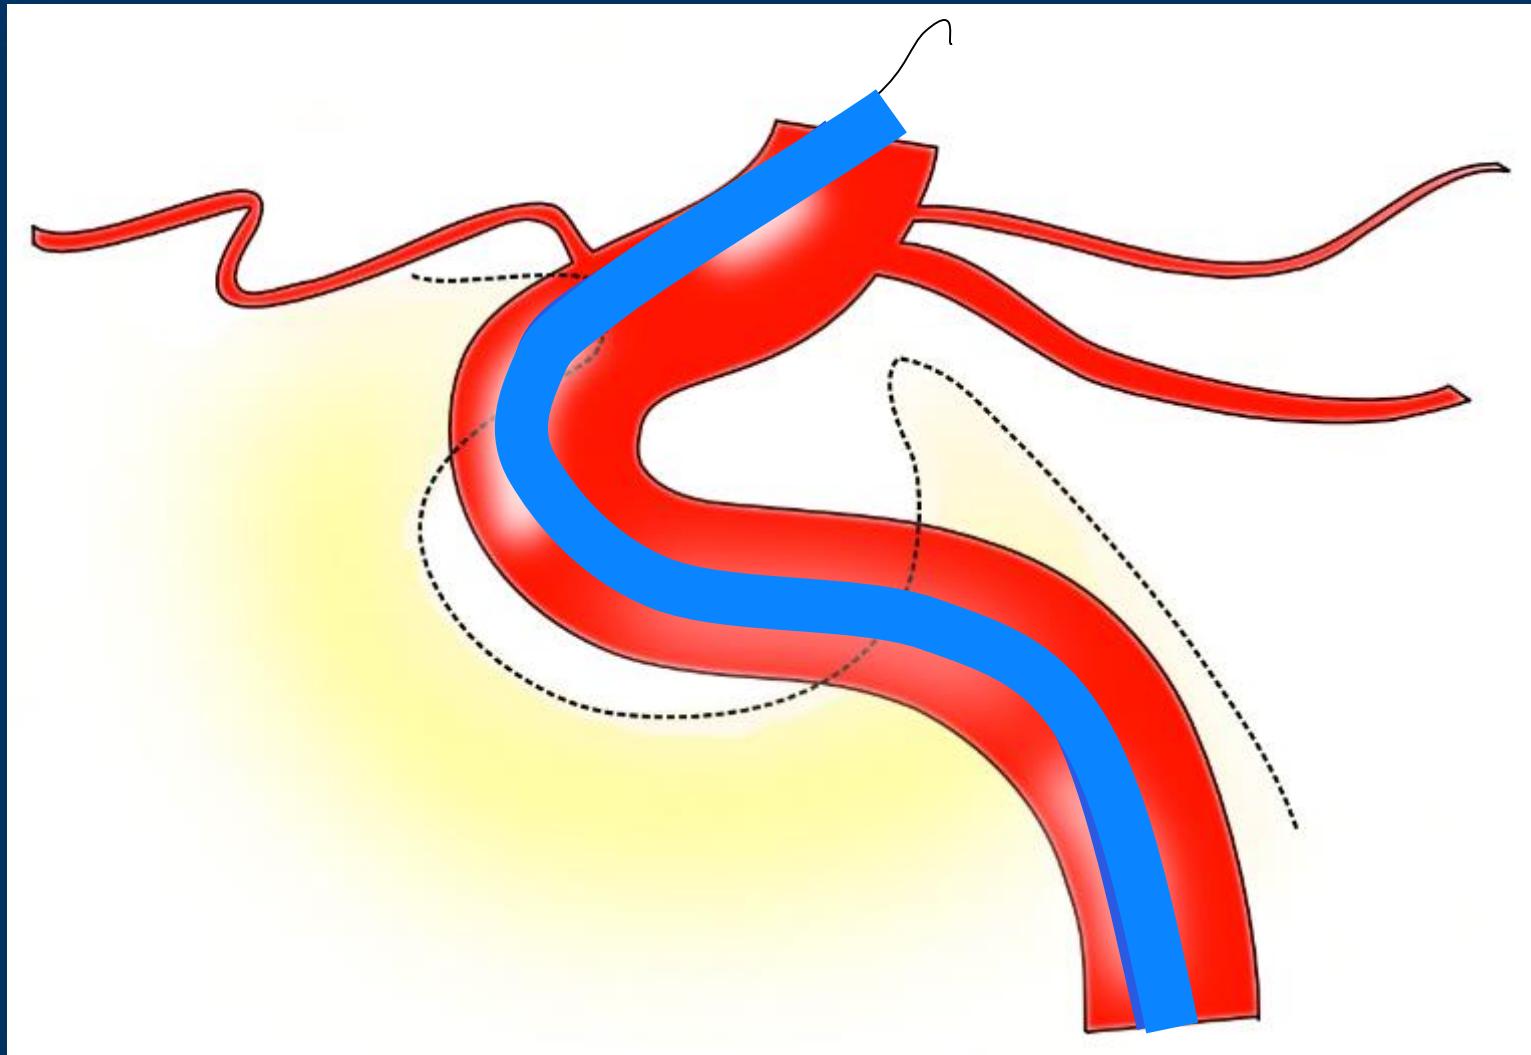

Que faire ?

One unit per box, includes shaping mandrel and introducer sheath

The Wedge™ Microcatheter is intended for general intravascular use, including the peripheral, coronary and neurovasculature for the infusion of diagnostic agents, such as contrast media, and therapeutic agents. For complete indications, potential complications, warnings and instructions, see Instructions for use (IU) P01110385.

FRANCHIR LE CAILLOT

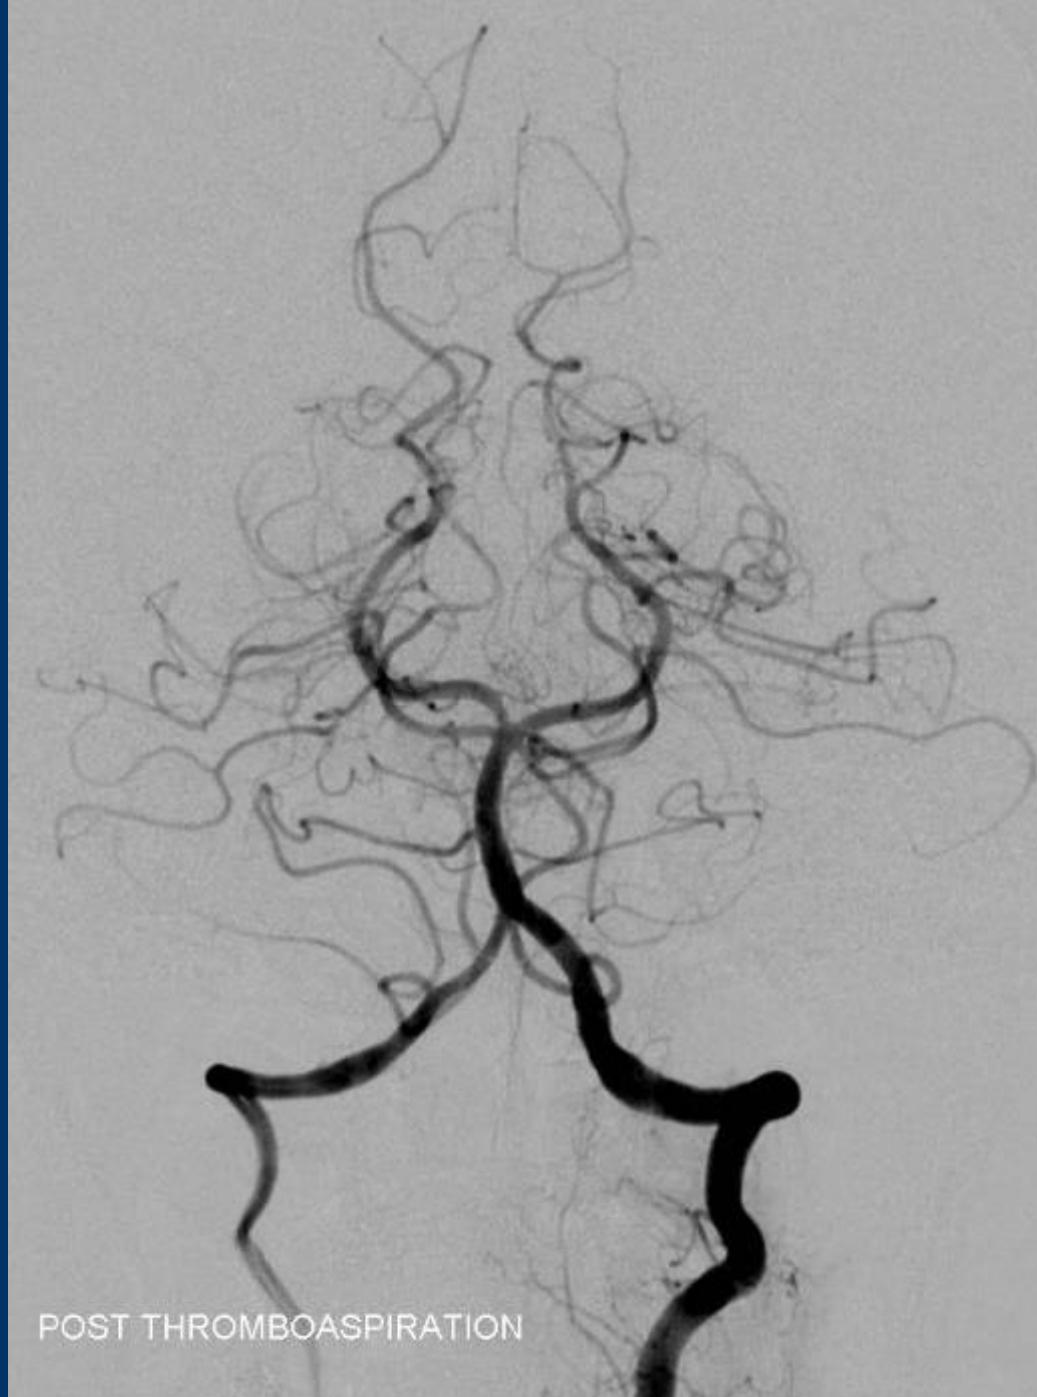

- Le moyen **le plus sûr** de franchir le caillot, c'est de ne pas le franchir ...
- Intérêt de l'aspiration : cathéter à large lumière au contact du caillot
- Pas de nécessité de franchir le caillot

- *Patiente de 63 ans*
- *Hémiplégie G*
- *NIHSS = 12*
- *Patiente en salle d'angio à H7*

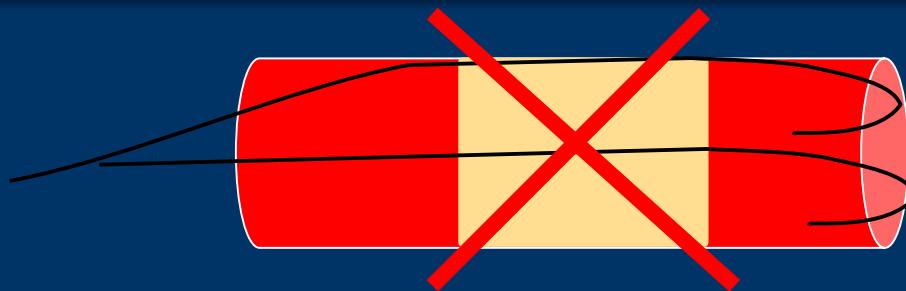

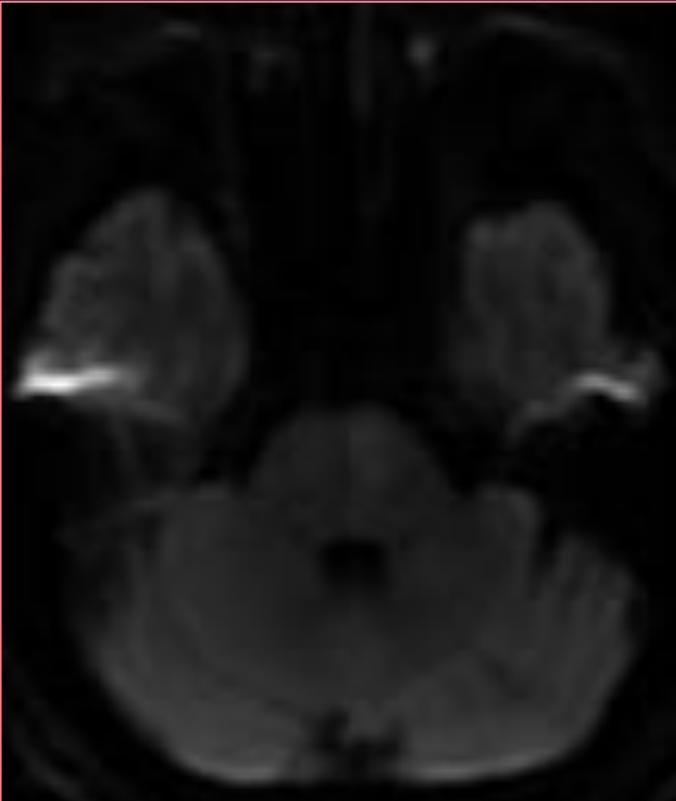

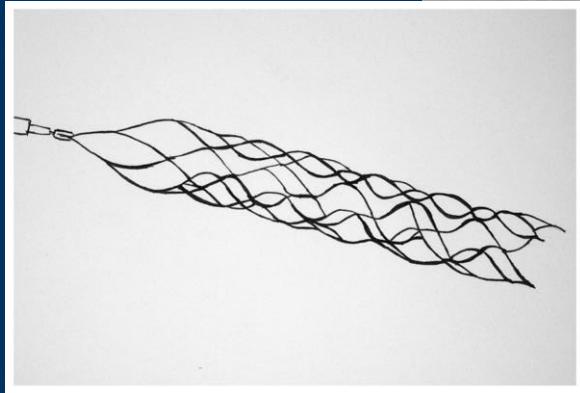

FRANCHIR LE CAILLOT

- Quand est-il nécessaire de franchir le caillot ?

Patient de 52 ans. Coma brutal

Contrôle Final

6 - 1 @ >

FRANCHIR LE CAILLOT

- *Quels sont les risques à franchir le caillot ?*

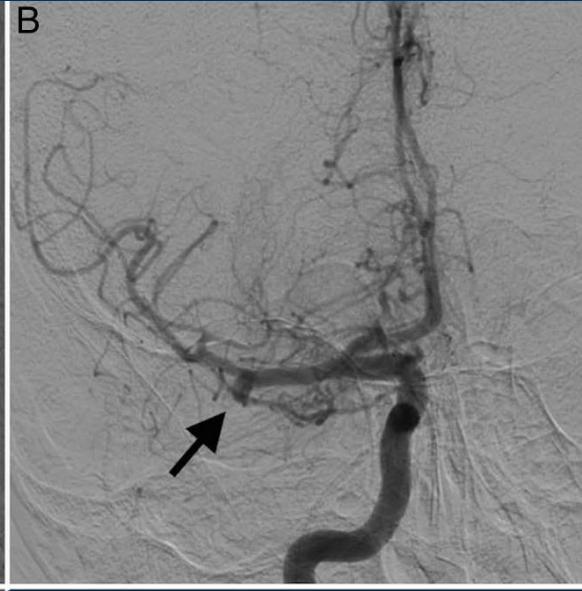

Comment franchir le caillot de façon sûre ?

- ***toujours avec le microguide***
- ***microguide en « J »***
- ***torquer le microguide en l'avancant***

FRANCHIR LE CAILOT

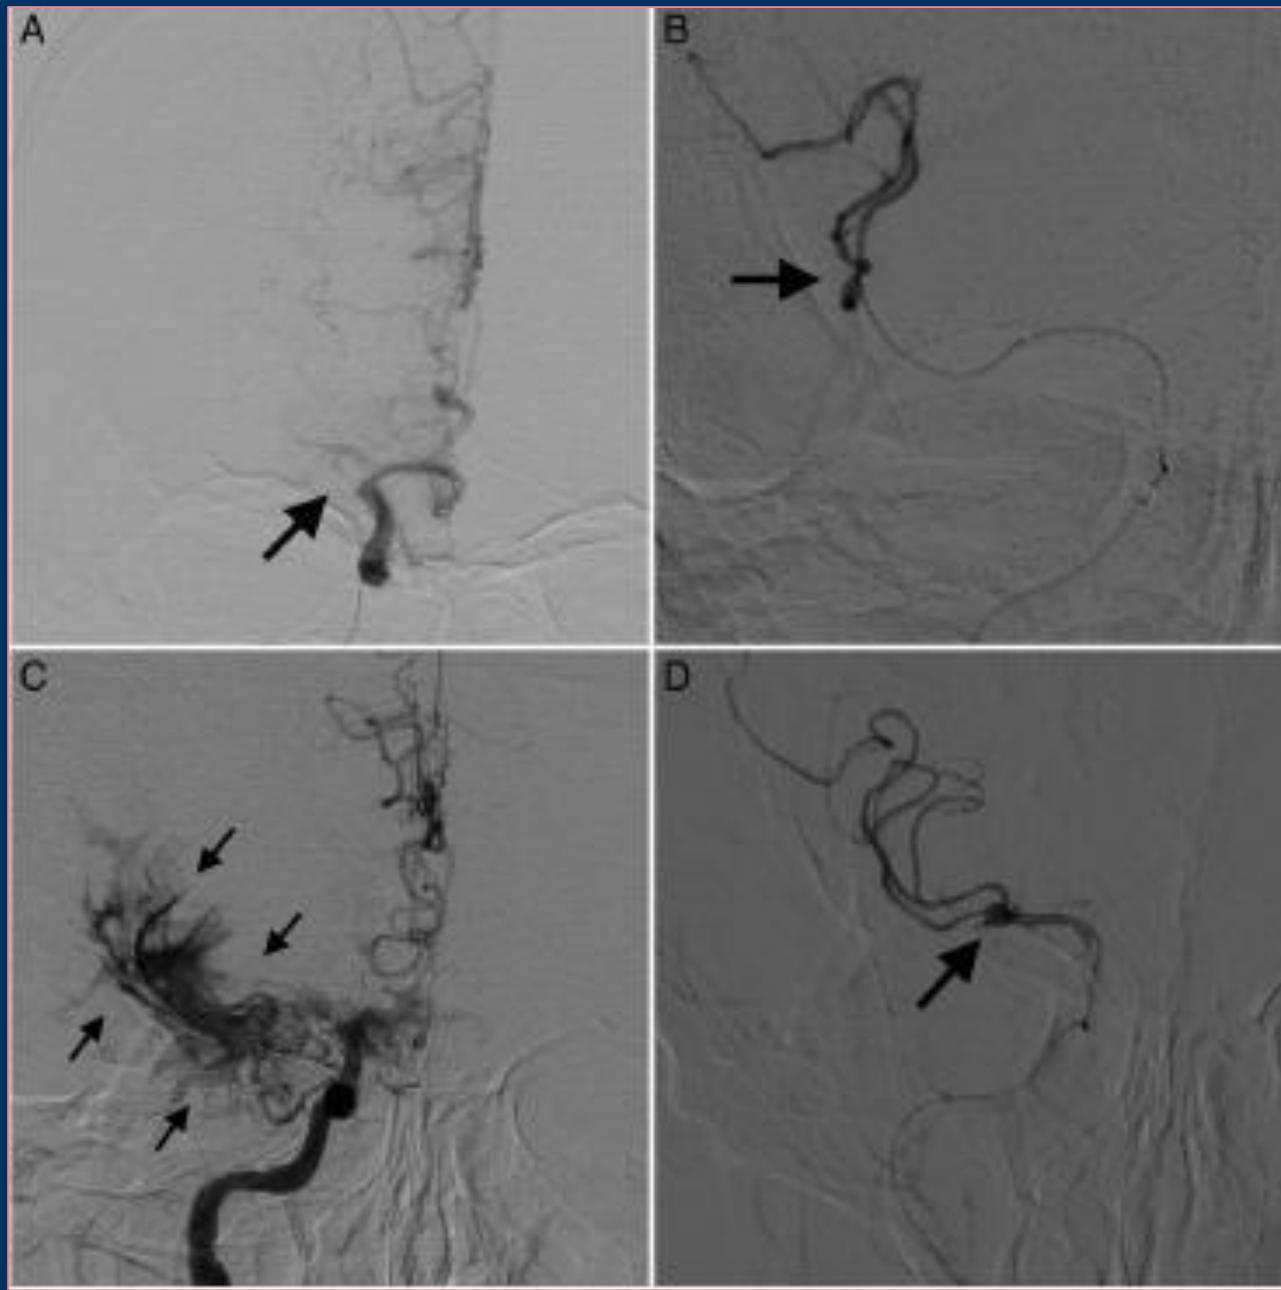

Quelle courbure pour franchir le caillot ?

**Anévrysme sur site occlusion
Pas exceptionnel ; jusqu'à 3,7%
des cas ***

Die Lageabweichungen der vorderen Hirnarterie im Gefäßbild¹

Von Dr. Erich Fischer, Assistent der Klinik

Der Verlauf der A. cerebri media zerfällt in folgende Unterabschnitte:

1) den horizontalen Anfangsteil (M_1), von der Teilungsstelle der Carotis int. bis zu dem etwa rechtwinkligen Knie der A. cerebri media reichend,

2) den nach hinten zu ansteigenden Inselabschnitt (M_2), welcher mit 2—3 Hauptästen dem Inselgebiet dicht aufliegt, im Seitenbild in der arteriellen Gefäßachse (Moniz) des Gehirns verläuft und im Vorderbild nahezu vertikal ansteigt,

3) Gefäßverzweigungen (M_3) der vorgenannten Hauptäste der Fossa Sylvii mit dem Kandelaber (Foix) und charakteristischen Schleifenbildungen der Aa. frontales asc. im Seitenbild. Auf der Vorderaufnahme bilden diese zusammen mit der folgenden Gruppe ein charakteristisches, nach oben zu scharf begrenztes Fächerbild (M_{3-4}), das bei Tumoren der Zentral- oder Parietalregion eine typische Kompression nach unten erfährt,

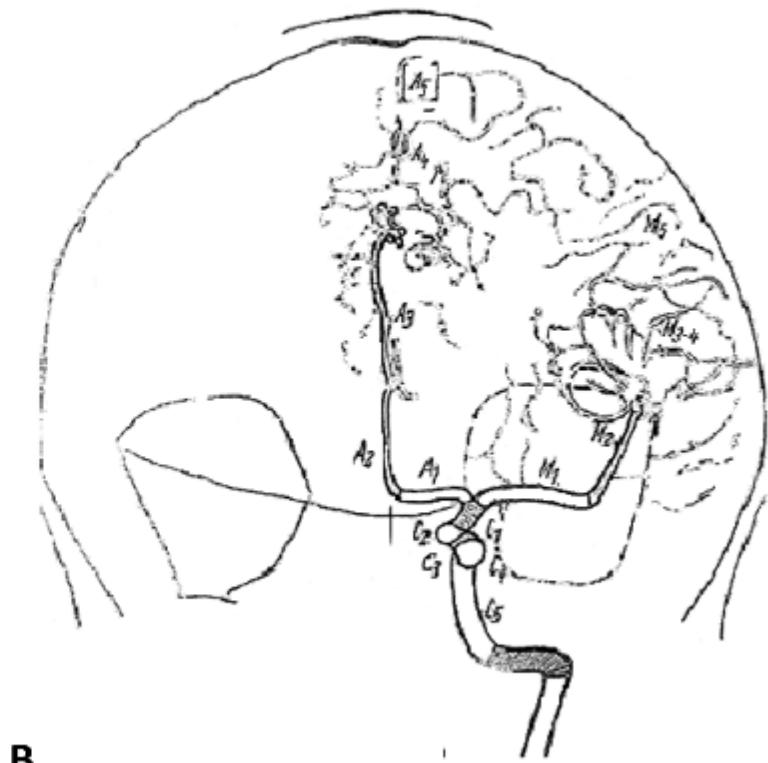

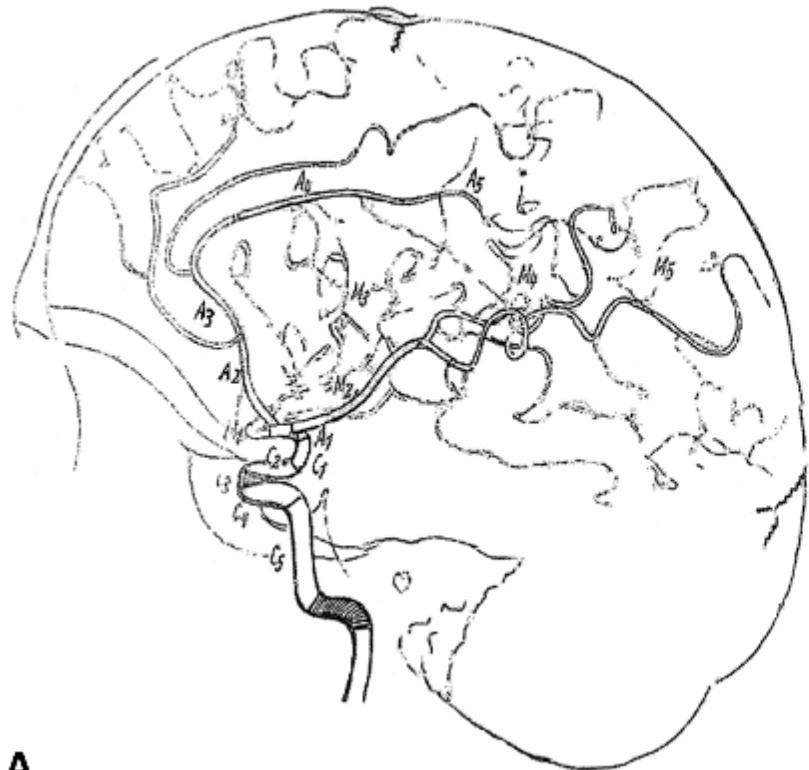

4) Gefäßverzweigungen (M_4) im hintersten Teil der Fissura Sylvii (Gyrus angularis-Gebiet), die im Seitenbild deutlich hervortreten, dagegen auf der Vorderaufnahme mit dem Fächer (M_{3-4}) zusammenfallen,

5) Endausbreitungen (M_5) der mittleren Hirnarterie. Sie sind zum Teil auf der Vorderaufnahme als feinere und mehr lockere Gefäßmaschen unmittelbar über dem dichteren und etwas gröber gezeichneten Fächerbild sichtbar, besonders klar jedoch im Seitenbild als divergierende Endäste (M_5) zu erkennen (Aa. parietalis post., angularis und temporalis post.). Bei Tumoren des Hinterhauptlappens können diese Äste von unten her eine Zusammendrängung und Parallelverlagerung nach oben oder aber, bei Entwicklung des Tumors mehr von dorsal her, eine stärkere Auseinanderdrängung in rechtwinkliger bis gerader Form erfahren.
